BrandDNA — Platform Audit & Verification Report

Inkloom AI Hackathon • Round 3 Final Submission

Team Name:	Meow	**Category:**	AI-powered Brand Governance
Team Leader:	Himanshu Kumar	**Frontend URL:**	https://brand-h4o9ffgb4-mewo3.vercel.app/
Team Member:	Abhishek Kumar Prajapati	**Backend API:**	https://branddna-1-wndy.onrender.com
Date & Stage:	November 3, 2026 • Round 3 Final Codebase & Live Demo	**Test Status:**	**101 / 101 Automated Tests Passing (100%)**

1. Executive Summary & Verification Verdict

Modern enterprises and creative agencies face acute friction maintaining brand consistency across distributed campaigns. Content drafts generated across copywriting agencies, in-house marketers, and AI engines often suffer from outdated pricing, inconsistent tone, prohibited terminology, or unverified claims. BrandDNA bridges this gap by acting as an intelligent pre-publication governance gateway.

Final Assessment Verdict: 100% SATISFIED & OPERATIONAL. The system was rigorously audited against the official Hackathon Proposal, the Backend Integration Specification, and comprehensive security test suites. All automated suites (101 unit, integration, and security tests) execute with zero failures. Both the Vercel frontend and Render backend are deployed and fully operational.

2. Persona & Role Alignment Audit

BrandDNA implements strict role-based authorization (RBAC) across three distinct enterprise personas defined in the competition guidelines:

Persona / Role	Proposal & Guide Specification	Implementation Status	Verification Evidence
Brand Manager (brand_manager / admin)	• Manages brand identity & guidelines • Defines approved facts, prices, tone, terminology • Submits content for AI review • Inspects findings and updates rules	**VERIFIED**	Full Brand CRUD, Guideline CRUD with version history, Approved Facts database (e.g. ■999 pricing), and Terminology rules.
Content Creator (creator)	• Self-registers via public signup • Submits ads, captions, emails, campaigns • Checks content using AI engine • Resolves issues and submits revisions	**VERIFIED**	Public registration defaults to creator. Multimodal upload (PDF/Image), Before/After diff editor, revision branching (v1→v2).

Platform Admin / Reviewer (admin / reviewer)	• Admin-controlled onboarding & invitations • Reviews flagged content queue • Approves or rejects submissions • Audits platform activity logs	**VERIFIED**	Invitations with 1-click COPY LINK activation URL, formal sign-off queue, mandatory rejection rationale, and immutable audit trail.

3. Core Feature & Workflow Verification Matrix

Every endpoint and architectural component was exercised against the live deployment and local test harnesses:

Feature Area	Architectural Requirement	Status	Test / Audit Details
Authentication & RBAC	JWT tokens, bcrypt password hashing, organization-level tenant isolation.	**100% Passed**	15 tests passing. Blocks privilege escalation, rejects duplicate emails, verifies token expiration.
Brand Workspaces	Dedicated knowledge base per brand: guidelines, facts, prices, terminology.	**100% Passed**	10 pre-seeded demo brands (NovaFit, GreenBasket, FinWise, etc.). Soft archiving supported.
Hybrid Review Engine	Exact deterministic regex matching + Google Gemini contextual LLM.	**100% Passed**	Catches 100% of injected price errors & prohibited words. Transparent fallback to secondary model.
Multimodal Upload	Multipart document ingestion: PDF, DOCX, PNG, JPEG, WebP.	**100% Passed**	Binary magic byte validation, in-memory buffer processing, zero disk orphans, 413 limit defense.
Workflow State Machine	Formal state traversal: draft → analyzing → needs_changes / pending_approval → approved / rejected.	**100% Passed**	Creators cannot self-approve (HTTP 403). Reviewers must supply mandatory rejection reasons.
Audit Trail & History	Permanent, immutable log of review decisions, timestamps, and versions.	**100% Passed**	GET /api/reviews/:id/audit-trail captures actor, action, timestamp, and previous state.
AppSec & BOLA Defense	Protection against BOLA/IDOR, prompt injection, and DoS attacks.	**100% Passed**	12 dedicated security tests passing. Zero npm vulnerabilities in backend and frontend.

4. Quantitative Benchmark Performance vs. Proposal Targets

A synthetic evaluation benchmark comprising 24 diverse marketing drafts (text and multimodal) was executed against the platform. The results substantially exceed the target thresholds outlined in Round 1 of the hackathon:

Evaluation Metric	Hackathon Target (Proposal)	BrandDNA Achieved Result	Compliance Status
ExactCheck Accuracy	100% on deterministic database terms	**100.0%** (17/17 factual errors flagged)	**TARGET MET**
False-Positive Rate	< 10% unwarranted flags	**0.0%** (0 unwarranted flags)	**EXCEEDED TARGET**
Detection Precision	> 85% accurate identification	**100.0%**	**EXCEEDED TARGET**
Detection Recall	> 85% capture of known errors	**100.0%**	**EXCEEDED TARGET**
Human-in-the-Loop	Strict non-bypassable sign-off	**100% Enforced** (HTTP 403 on self-approval)	**TARGET MET**

5. Pre-Seeded Demo Brand Workspaces (10 Brands)

BrandDNA boots with 10 completely isolated fictional brand workspaces covering various commercial sectors. Each workspace includes isolated guidelines, approved factual pricing, and terminology constraints:

Brand Name	Industry / Domain	Approved Fact / Pricing	Mandated Tone & Lexicon Rule
NovaFit Health	Fitness & Wellness	Premium Membership: **■999/mo**	Use 'members'; strictly forbid 'users'
GreenBasket	Organic Grocery	Delivery Fee: **■49**	Emphasize sustainable, pesticide-free farming
FinWise	Financial EdTech	Masterclass Course: **■499**	Forbid 'guaranteed returns' & get-rich-quick claims
TravelNest	Luxury Getaways	All-inclusive: **■12,999**	Premium hospitality voice; avoid discount jargon
PureGlow	Clean Skincare	Vitamin C Serum: **■699**	Strictly forbid untested medical/dermatological claims
ByteForge	Cloud Developer Tools	Developer Tier: **■1,499/mo**	Developer-first, benchmark-grounded technical tone
EduSpark	K-12 Learning	Annual Pass: **■799**	Encouraging, student-focused, inclusive tone
FreshBite	Healthy Food Delivery	Subscription: **■199/meal**	Highlight fresh, locally sourced ingredients
HomeEase	Home Services	Deep Cleaning: **■599**	Professional, punctual, and reliable tone
EcoDrive	EV Mobility	Public Charging: **■15/kWh**	Eco-conscious, modern mobility voice

6. Security Posture & Architectural Defenses

A rigorous application security audit confirmed zero high/critical vulnerabilities across both layers:

• **BOLA / IDOR Containment:** Requests to read or modify guidelines, facts, or assets belonging to other organizations are rejected with HTTP 403.

• **Privilege Escalation Defense:** Registering with emails containing 'admin' or injecting role fields in public forms is strictly blocked.

• **In-Memory Stream Processing:** File uploads are buffered strictly in RAM; no orphaned files are persisted to server disks.

• **Binary Signature Validation:** Magic byte detection prevents executable masquerading as PNG, JPEG, WebP, or PDF.

• **Prompt Injection Neutralization:** User drafts are enclosed within <submitted_content> isolation envelopes.

• **Zero Vulnerabilities:** npm audit executed across backend and frontend confirms 0 known vulnerabilities.

7. Conclusion & Submission Sign-Off

BrandDNA transforms enterprise brand governance from a subjective, slow, error-prone manual process into a repeatable, explainable, and automated operational pipeline. By combining deterministic data verification with advanced multimodal LLM analysis while enforcing strict human approval authority, BrandDNA fulfills all Round 3 deliverables for the Inkloom AI Hackathon.
